

Luke Taylor

Army Network Engineer / Junior Web Developer

Manchester City Centre, Greater Manchester DH6 3LH

luke.taylor11@hotmail.com

+44 7532 701359

Hardworking and disciplined IT specialist with a broad skill set spanning software development, network engineering, and systems administration, supported by a disciplined military background in the role of an Army Networks Engineer.

With experience working in high-pressure environments, I have developed strong leadership and communication skills, effectively managing teams and collaborating with diverse groups to deliver reliable technology solutions. I am committed to continuous learning and staying up to date with emerging technologies to provide innovative and secure systems.

Experienced in troubleshooting complex technical issues, deploying secure networks, and developing web applications that enhance user experience and operational efficiency. Strong ability to adapt to evolving technologies and environments, and maintaining high standards of quality and security.

Looking to apply my diverse skills and problem-solving mindset in new roles that offer growth and flexibility while balancing new personal commitments.

Personal Details

Driver's License: B

Eligible to work in the UK: Yes

Industry: Software Development, Technology

Total years of experience: 6

Work Experience

Rope Access Technician

Nordic Access

July 2024 to August 2025

Once leaving the Military I decided to do some contract work fixing the blades on wind turbines. It is non-IT related but taught me some great skills and now I wish to go back to an IT path and work closer to home due to personal commitments.

Network Engineer

British Army

January 2018 to February 2023

- Completed a specialist training course to meet the requirements of defence, with employment in a high pressure royal signals unit. The year-long engineering course enabled me to be capable of LANs, WANs, SATCOM, and all army radio systems. As Lance Corporal, I had my own team of soldiers who I deployed with and commanded to setup servers and accounts for all staff officers, communicating through CISCO router tunnels, out to space satellites and back to UK headquarters.

- Provided staff working areas, IT infrastructure, secure network connectivity, and service desk support for over 400 staff around the world

- Led a team deploying and maintaining secure, global military communication networks using Cisco routers, satellite links, and Windows Server environments.

- Designed IPv4 subnetting schemes, configured IPv6 networks, and administered Active Directory and Group Policy for over 400 users.
- Installed, configured, and secured Cisco routers and switches from initial setup through advanced IOS configuration.
- Completed Army-led CCNA training; delivered technical training and support under high-pressure, multinational environments.
- Supported COVID-19 response deployments and NATO exercises, demonstrating adaptability and leadership.
- Deployed to Estonia for 6 months to train with other NATO forces at the start of the Russia and Ukraine conflict

Apprentice Web Developer

Cedrec

April 2016 to January 2019

I decided what was being taught at sixth form was too basic and I was very passionate about taking my development skills further so I applied for an apprenticeship here at Cedrec.

After 2 years of working at Cedrec I became capable of doing many tasks, and trusted with big projects. The big project I was given at the end of 2016 was to create a website for an art gallery (Thought Foundation) from scratch. This started off as a simple website I had to make by copying a PSD file. It is now a fully responsive, database driven website with a full backend system which I also made from scratch. Whilst the other developers were working on the Cedrec site, I was given many big tasks.

Examples of tasks I was given using PHP laravel framework:

- Create an event booking system
- Create a blog
- Social media integration and sharing
- Automated email campaigns and using the mailchimp API
- Database to PDF converter for events
- Inventory tracking system using barcode scanners
- User login and permissions
- Till cashing up system to calculate profits at the end of each day
- Artist submissions and public enquiry submissions
- Allow people to make applications to work at the gallery
- Facebook-style comments using a jquery plugin and ajax
- File uploaders
- Managing and securing databases and customer sensitive information

Skills

- Laravel
- JavaScript
- VU
- Javascript.
- CSS
- Git
- jquery
- PHP
- MySQL

- Cisco IOS
- React
- HTML
- HTML5

Certifications and Licenses

Microsoft Technical Associate

Present

Awarded at the end of my Software Development Apprenticeship.

Software Development Level 3

2017 to 2035

Awarded for completing my apprenticeship

Additional Information

IT Skills

- HTML & CSS
- Javascript
- JQuery
- PHP
- MySQL
- Laravel
- React and Vue.js
- Inertia JS
- CISCO IOS
- Active Directory
- IPv4 Subnetting
- Software troubleshooting

Other

- Rope Access Level 1
- Global Wind Organisation Courses
- Blade Repair
- Full UK Passport and Driving License
