

Luke Taylor CV

Junior Cloud / Network Engineer / Web Dev Hamburg, Germany (Relocating) | Open to Remote / Hybrid luke@luketaylor.de | +44 7395 5331199 Portfolio: <https://luketaylor.de/>

Professional Summary

Motivated and adaptable IT professional with a background in network engineering, software development, and military communications. Currently transitioning into cloud/networking and modern software roles, with active learning in AWS and hands-on experience building web applications and freelance projects.

Proven ability to work in high-pressure environments, lead teams, and deliver secure, reliable systems. Now seeking an entry-level or junior IT role in a forward-thinking company where I can continue developing cloud, development, and DevOps skills while contributing immediately.

Key Skills

- Cloud & DevOps (Learning AWS, Cloud Fundamentals)
- JavaScript (React)
- PHP (Laravel)
- HTML5, CSS3
- MySQL & Database Design
- Git & Version Control
- Networking (Cisco IOS, LAN/WAN, IPv4/IPv6)
- Active Directory & Windows Server
- Problem Solving & Troubleshooting

Professional Experience

Rope Access Technician

Nordic Access | Jul 2024 – Present - Performed maintenance and repair work on wind turbine blades in high-risk environments - Developed strong discipline, safety awareness, and problem-solving skills - Demonstrated adaptability and teamwork in physically and mentally demanding conditions

Network Engineer (Lance Corporal)

British Army | Jan 2018 – Feb 2023 - Led a team deploying and maintaining secure global communication networks - Configured and managed Cisco routers, satellite systems, and secure infrastructure - Delivered IT infrastructure and support for over 400 personnel

worldwide - Administered Active Directory, Group Policy, and network configurations (IPv4/IPv6) - Operated in high-pressure environments including NATO deployments

Apprentice Web Developer

Cedrec | Apr 2016 – Jan 2019 - Developed a full-stack web platform for an art gallery from scratch - Built features including booking systems, blogs, and user authentication - Integrated APIs (Mailchimp) and implemented database-driven solutions - Gained strong experience in Laravel, PHP, MySQL, and frontend technologies

Certifications

- Microsoft Technical Associate
- Software Development Level 3
- CCNA Training (Army-led)

Projects

Portfolio Website

<https://luketaylor.de/>

Full-stack Laravel + React (Vite) site on AWS I built to get a deep dive into AWS EC2 instances. It is hooked up to a knowledgebase using Amazon Bedrock which indexes files I upload to an S3 bucket.

Punchyface IOS Game

[Project Demo Link](#)

Punchyface is an arcade-style mobile game built with Expo / React Native using cursor, where the player moves upward through five floors, avoiding hazards and enemies. It includes player lives, multiple enemy types, sound effects, and animations for responsive gameplay feedback. There is a video demo within my portfolio site.

Company Organisation App

[Project Demo Link](#)

An Expo / React Native app for wind-sector companies that use contractors across sites. It shows live team locations on an interactive map, lets coordinators find people not currently on projects, with filters by available or relevant training courses, and supports per-team accommodation and vehicle assignment, operational alerts, and uploading vehicle check documents tied to teams or vehicles.

Kohima Museum

<https://www.kohimamuseum.co.uk/>

During my military career they put me as the lead to making any updates and changes to their existing WordPress site for the museum on base. Very basic WordPress skills, and unfortunately, they did not let me re-design it as I think I could have made it look much better.

JMorph Macros

[Youtube Link](#)

This is a personal project I did for a game I play called World of Warcraft. It is no longer live, but I do have a YouTube video showcasing this. It uses the battle net API and allows help with an injected addon to change their character's appearance to be the same as any popular player they like. It had thousands of people actively using it at the time including a lot of my own friends.

Additional Information

- Currently studying AWS Cloud courses
- Actively building freelance development experience
- Learning German (beginner level)
- Relocating to Germany to move with my current partner
- Full UK driving license & passport

Availability & Preferences

- Open to entry-level / junior IT roles
- English-speaking work environment preferred initially
- Interested in flexible or remote-friendly roles

Languages

- English (Native)
- German (Beginner)
